SUMMARY

Technical Product Manager who owns the roadmap, writes the specs, and ships the code. Owned integration programs serving customers representing \$2M-\$15M in annual returns, taking quarterly delivery from 2 of 5 planned integrations to full completion. 3+ years building business-critical applications in TypeScript, Go, and Python.

EXPERIENCE

Program Manager | Arctic Wolf Dec 2025 - May 2026

- Took quarterly delivery from 2 of 5 planned integrations to full completion plus 2 pulled forward, owning a detection and response integration program serving customers representing \$2M-\$15M in annual returns, across a ~10-person team spanning 3 leadership groups up to the CTO
- Protected a customer-facing feature for the entire Windows user base by catching a Microsoft end-of-support deadline 20 days out, then building and leading the cross-functional deprecation playbook that aligned Product, Engineering, and Marketing on ownership and timelines
- Landed priorities, dependencies, risks, and delivery commitments for each increment by running multi-day PI planning across teams as part of the PMO

Software Developer | Arctic Wolf May 2022 - Dec 2025

- Owned the interaction design decision on a customer-facing feature by bringing the product team three options with the tradeoffs for each, then built the chosen flow end to end and cut the time for support engineers to place a call by 50%
- Unblocked a 3-quarter monolith migration by rebuilding the full CRUD, search, and list API surface for the Notes service and adding UUID identifiers to the database schema, co-leading the decomposition as a 3-person team and moving services from Python to Go
- Worked across the AWS infrastructure and CI/CD tooling behind an internal web platform holding customer records, maintaining the pipelines alongside feature development on the same system

Chief Operating Officer | The Last Otakus Inc. Mar 2023 - Dec 2025

Concurrent, part-time

- Removed the manual handling on every personalised order by designing and building the end-to-end consumer ordering funnel for kraftypawz.com, extending Shopify with custom code for an automated fulfilment workflow and a personalised-order path, working from user research through checkout

PRODUCT PROJECTS

Stride: Financial Forecaster | Product Manager May 2026 - Present

- Found an unserved gap in short-term (2-5 year) financial planning through user interviews and competitive research, then wrote the PRD, user stories, and acceptance criteria, and now build the product with Google ADK, Gemini, FastAPI, and React

Vulnerability Alert Tooling | PM & Engineer, Arctic Wolf Oct 2025

- Shipped a new internal tool to production for a 200-person department by surveying 70 users to gather requirements and translating findings into 4 features ranked by customer value and feasibility

Bulk Product Editor | Ruby on Rails, OpenAI, Shopify API 2024

- Shelled a finished internal tool rather than launching it as a Shopify app, after finding storage and per-call pricing broke the unit economics at any price the market would bear

EDUCATION & CERTIFICATIONS

Master of Engineering Management | University of Ottawa 2025 - 2027 (expected)

BEng, Systems and Computing Engineering (Co-op) | University of Guelph 2017 - 2022

SKILLS

Product: Roadmap ownership, product specs, PRDs, user stories, acceptance criteria, discovery and user research, prioritisation, stakeholder alignment, risk and dependency management

Delivery: Scrum, PI planning, PMO delivery cadence, sprint facilitation; Jira, Confluence, Aha!, Miro, Figma, GitHub Projects

Technical: TypeScript, Go, Python, JavaScript, SQL; React, FastAPI, REST API design, service decomposition, PostgreSQL, Elasticsearch; AWS, GCP, Docker, Kubernetes, CI/CD, Prometheus, Grafana; Google ADK, Gemini, OpenAI API

Certifications: CSPO (Certified Scrum Product Owner), AWS Certified Cloud Practitioner, Google x Kaggle 5-Day AI Agents Intensive
