SUMMARY

Software engineer turned program manager, moving into technical product management. Comfortable owning a roadmap, writing the stories, and reading the code.

EXPERIENCE

Program Manager | Arctic Wolf

Dec 2025 - May 2026

- Led a business-critical detection and response integration program, aligning Directors, Senior Engineering Managers, and the CTO across a ~10-person team spanning 3 leadership groups; took quarterly delivery from 2 of 5 planned integrations to full completion plus 2 pulled forward
- Owned the program roadmap across a 4-quarter horizon in Aha!, working through scope and sequencing detail with each contributing team and securing approvals
- Ran multi-day PI planning for the programs owned as part of the PMO, working across teams to land priorities, dependencies, risks, and delivery commitments for the increment
- Built and led a cross-functional deprecation playbook aligning Product, Engineering, and Marketing on ownership and timelines, after catching a Microsoft end-of-support deadline 20 days out that threatened a customer-facing feature for the entire Windows user base

Software Developer | Arctic Wolf

May 2022 - Dec 2025

- Proposed three design options for the click-to-call flow with tradeoffs for each and presented them to the product team, owning the interaction decision rather than implementing a handed-down spec
- Designed and built that flow end to end, from the Zoom integration through the UI and a confirmation-dialog safeguard, cutting the time for support engineers to place a call by 50%
- Co-led a 3-quarter decoupling of a monolithic repository as a 3-person team, rebuilding the full CRUD, search, and list API surface for the Notes service and adding UUID identifiers to the schema to enable migration; migrated services from Python to Go

Chief Operating Officer | The Last Otakus Inc.

Mar 2023 - Dec 2025

Concurrent, part-time

- Designed and built the end-to-end consumer ordering experience for kraftypawz.com on Shopify, extending the platform with custom code for an automated fulfillment workflow and a personalized-order path, working from user research through checkout

PRODUCT PROJECTS

Stride: Financial Forecaster | Product Manager

May 2026 - Present

- Running discovery, the PRD, user stories, and prioritization for an AI forecasting agent built with Google ADK, Gemini, FastAPI, and React; iterating a prototype to validate flows before committing engineering time, and reviewing code alongside the engineer building it

Vulnerability Alert Tooling | PM & Engineer, Arctic Wolf

Oct 2025

- Led an internal hackathon project as PM, surveying 70 users to gather requirements and translating findings into 4 features ranked by customer value and feasibility; shipped to production for a 200-person department

EDUCATION & CERTIFICATIONS

Master of Engineering Management | University of Ottawa

2025 - 2027 (expected)

BEng, Systems and Computing Engineering (Co-op) | University of Guelph

2017 - 2022

SKILLS

Product: Roadmap ownership, backlog prioritization, user stories, acceptance criteria, PRDs, discovery and user research, stakeholder alignment, risk and dependency management

Delivery: Scrum, PI planning, PMO delivery cadence, sprint facilitation; Jira, Confluence, Aha!, Miro, Lucidchart, GitHub Projects, Figma, Notion

Technical: Python, Go, TypeScript, React, SQL, PostgreSQL, Elasticsearch; API design, service decomposition; AWS, GCP, Kubernetes, Docker, GitHub Actions; Google ADK, Gemini, OpenAI API

Certifications: CSPO (Certified Scrum Product Owner), AWS Certified Cloud Practitioner, Google x Kaggle 5-Day AI Agents Intensive
