SUMMARY

Full stack developer with 4+ years building and shipping production web applications in React, TypeScript, Node.js, Python, and Go. Owns features end to end, from interaction design and API work through PostgreSQL, AWS, and Kubernetes deployment, including an internal product built from scratch as one of two engineers. Works with AI coding assistants as a standard part of the development loop.

EXPERIENCE

Arctic Wolf

May 2022 to May 2026

Software Developer

May 2022 to December 2025

- Built Action Centre, an analyst dashboard, from scratch in React, Node.js, and TypeScript as one of two engineers, delivering the data schema, filtering, pagination, and reporting that analysts use to see customer context in one place
- Designed and shipped a click to call feature end to end, from the Zoom integration through the UI and a confirmation dialog safeguard, after presenting the product team three options with tradeoffs, cutting the time support engineers spent placing a call by 50%
- Rebuilt the full CRUD, search, and list API surface for the Notes service and added UUID identifiers to the schema, enabling a 3 quarter decoupling of a monolithic repository by a 3-person team and the migration of services from Python to Go
- Streamlined the feature flag system into a self serve tool with guardrails and CloudWatch audit logging, cutting change friction by 70% by removing the ticket queue and letting any engineer in the company change a flag directly. Use AI coding assistants (Claude, GitHub Copilot) as a core part of the daily workflow
- Deployed backend and infrastructure services through Jenkins and Harness and the front end through GitHub Actions on a shared rotation, and contributed to the Cypress to Playwright, Vite, and EKS migrations that kept the stack current
- Built against PostgreSQL and Elasticsearch in production and defined the SLIs, SLOs, and alerting for the Notes service, surfacing Prometheus metrics in Grafana and routing CloudWatch and PagerDuty alerts at agreed severity levels

Program Manager

December 2025 to May 2026

- Led a business-critical detection and response integration program across a 10-person team, owning executive alignment with Directors, Senior Engineering Managers, and the CTO, and raised quarterly integration delivery from 2 of 5 planned to full completion plus 2 pulled forward from the next quarter

Ecobee

Security Engineer Co-op

May 2021 to December 2021

- Built and deployed an automated GitHub vulnerability alert application in Go, using Terraform for a consistent CLI workflow, Kubernetes and Docker for deployment and ArgoCD for continuous delivery, with Prometheus and Grafana surfacing alert metrics to the team
- Wrote Go alongside security engineering work and deployed code and features through ArgoCD and Kubernetes on GCP, and reviewed code for security issues across Go, Java, and C++

LEADERSHIP & PROJECTS

Stride: Financial Planning Tool

May 2026 to present

- Drive product and engineering for AI powered financial planning tool, shipping to early adopters and building it directly with Claude code as the primary coding partner using React, TypeScript and Firebase (Firestore, Auth, Hosting) along with Gemini conversational tool

EDUCATION

Master of Engineering Management | University of Ottawa

expected 2027

BEng, Systems and Computing (Co-op) | University of Guelph

2022

SKILLS

AI: Google ADK, Gemini, OpenAI API; LLM and agent integration into product features

Languages: TypeScript, JavaScript, Python, Go, SQL

Frontend: React, Vite, HTML/CSS

Backend and data: REST APIs, Node.js, PostgreSQL, Elasticsearch, Kafka, AWS DMS

Cloud and delivery: AWS, EKS, Kubernetes, Docker, Terraform, Jenkins, GitHub Actions, Harness, Prometheus, Grafana, CloudWatch

Certificates: AWS Certified Cloud Practitioner, Google x Kaggle AI Agents, Certified Scrum Product Owner
